

Fire Control Plan Pack

Fire Control & Life Saving Symbols published in ISO17631:2002

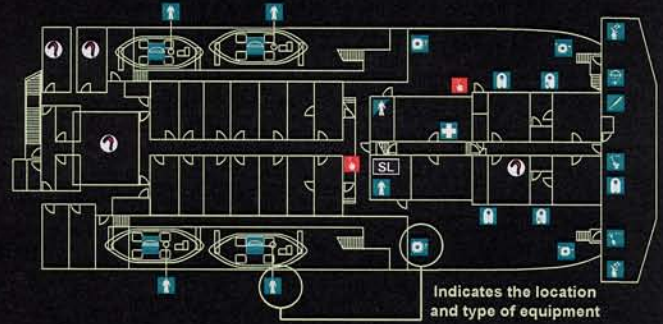

All marine vessels should carry Fire Plans readily available by both ships staff and shore-side emergency services. It is essential that fire plans are clear and concise in their meaning. JALITE's Fire Control Plan pack containing its Fire Control & Life Saving symbols allows the user to amend and update their shipboard safety plans bringing inline with the recommendations of International Standard 17631:2002

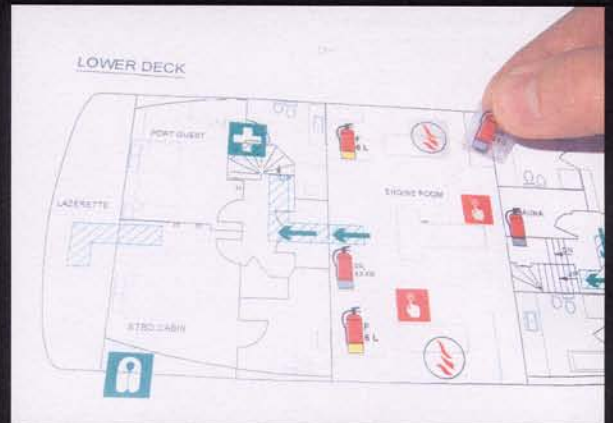

The Fire Control Plan Pack comes in the format of a bound presentation folder providing you with the full range of Fire Control symbols, as well as the symbols for Life Saving appliances. A total of 170 symbols provides you with a massive 6500 adhesive vinyl pictograms over 70 pages.

Each individual symbol is also enclosed on a CD ROM in both AutoCAD and JPEG formats, allowing the user to update any digitally stored plans in addition to any hard copies stored on the vessel. A simple drag and drop command makes it easy to transfer each symbol from CD-ROM to your digital safety plan. The CD contains step by step instructions required to install the software.

Should you require a Fire Plan to be produced for your vessel JALITE offer an extended range of services related to Fire safety plans - including custom drafting by our design technicians to your specific needs, using their in depth knowledge of mandatory requirements for Fire Plans. JALITE offer this service on a range of media, including it's market leading JALITE AAA Rigid Photoluminescent PVC.
