Before drills consult company safety instructions before launching. Ensure a risk assessment has been carried out and all control measures are in place before launching.
Escape route signs should be sited in conspicuous positions along the escape routes, priority given to the shortest possible route from any point. They are also required at every decision making point, indicating: Change of level, Change of direction, Identification of escape doors by situing signs above escape doors.

Jalite escape route signs conform to International Standards providing a standardised meaning of the direction of escape.
